Poznań, Poland

Frontend Developer specializing in mobile and web applications with more than 3 years of experience. Proficient in creating visually appealing and smooth interface animations while effectively integrating with REST APIs. My diverse background includes e-commerce, healthcare applications and Project Management applications.

I am eager to develop my skills in new areas and am open to full-time, part-time, or project-based opportunities. In addition, I have hands-on experience working within Agile (SCRUM) methodologies.

Professional Experience

September 2025 – Present | [Blockchain Labs Team](#) middle frontend developer

Developing frontend for a web application (partner/CPA platform with registration, authentication, profiles, and newsletters) using React PWA and TypeScript stack. Contributing to PWA CRA React app implementation: forms, UI components, API integrations, newsletter creation, and 2FA/SMS/email authentication. Focus on security, statement editing/creation, and animated landing page development.

- ❖ Creating reusable UI React components with MUI
- ❖ Integrated HTTP client and interceptors for authentication, centralized error handling, and retry logic. Used react-hook-form and form validation, error handling and localization.
- ❖ Animated landing page using GSAP.
- ❖ Developing cross-browser email newsletters.

Tech stack: JavaScript, HTML, React, Next.js 14, SCSS, Ant Design, TypeScript, Zustand, Axios, Supabase

The project team: 1 TL, 1 UX/UI, 1 FE, 1 BE, 1 BA, 1 SA, 1 PM, 1 QA, 1 InfoSec, 1 DevOps

Project status: in progress

Duration: present

August 2024 – December 2025 | [Volt X](#) frontend developer

I specialize in building scalable and reliable interfaces for ERP, CRM, MES, HCM systems using Next.js, TypeScript, React, Ant Design, and other modern frontend tools. My experience covers the full spectrum of UI development — from architectural design to implementing business logic and integrating with backend APIs (REST / Supabase / Firebase).

- ❖ My role in the project involves handling architectural decisions (we use either a microservice or atomic application architecture)
- ❖ Managing the processing of imported and exported files within the system — specifically, validating imported files according to required system formats, storing projects, and displaying them in tables. I'm also responsible for table analytics presented as charts.
- ❖ Optimize performance, SSR, and routing in Next.js applications
- ❖ Set up authentication (Google, Microsoft, Supabase Auth, etc.)
- ❖ Develop tables, forms, filters, and navigation in large-scale interfaces

Tech stack: JavaScript, HTML, React, Next.js 14, SCSS, Ant Design, TypeScript, Zustand, Axios, Supabase

The project team: 1 SA, 1 TL, 1 UX/UI, 1 FE, 2 BE, 2 ML

Project status: Sold & Closed

Duration: 17 month

June 2024 – January 2025 | [Alivio-AI](#)
frontend developer (part-time)

travel-ai Angular app

A travel management platform powered by artificial intelligence. The application provides role-based access and ensures secure authentication. AI enables anonymous users to find the most convenient and affordable routes by analyzing current market offers. Authorized users can book trips and view their past journeys. The application offers an intuitive interface for managing trips, with separate pages for user registration, profile management, and booking trips.

- ❖ Worked on dividing the entire application into large modules
- ❖ Developed authorization and routing in the application
- ❖ Used Api to show a transferable list of existing travel options. This list could be filtered and added to user groups

Tech stack: Angular 18, Angular Material, SCSS, TypeScript, RxJS, NgRx, Jasmine + Karma, signals

Duration: 1 month

cooking-ai React and React Native app

This is a web and mobile application for organizing a grocery list and generating recipes based on it. The list can be entered manually or by uploading a photo containing all the products. After this step, the app displays a list of possible recipes that can be prepared. Once a recipe is selected, the app starts the cooking process, which includes a step-by-step guide with cooking timers. The mobile application built with React Native fully replicates the web version developed in React.

- ❖ On a project using microservice architecture, participated in the development of the overall structure of the application from the start;
- ❖ I participate in the creation of basic functions, variables and components in the application core. I am involved in application navigation and ui development;
- ❖ Responsible for the development of a mobile application. I rewrite web components for mobile ones, conduct onboarding and code reviews for new programmers on a React Native project.

Tech stack: React, React Native CLI, Styled-Components, TypeScript, React Native Async Storage, Reanimated, Formik + Yup, Supabase

Duration: 6 month

The project team: 1 PO, 1 TL, 1 PM, 1 BA, 2 UX/UI, 2 FE, 3 BE, 3 QA

February 2024 – June 2024 | [Milestone](#)
junior frontend developer

Web application for optimizing logistics supplies

A web application for tracking, sorting, and shipping warehouse supplies. The app included a table with all products from suppliers, along with full delivery information and status. Users with different access levels had to update box statuses by recording the required data at each stage. The final stage triggered the process of sending a set of boxes to sellers.

- ❖ Web application on React for tracking logistics deliveries. Displayed a large amount of data using react-admin tables. I developed the front from scratch;
- ❖ Communicating with the backend, developed the frontend client and admin sides of the application.

Tech stack: Javascript, Typescript, React, React-Admin, Redux, HTML, SCSS, Jest, Material UI, Docker, Axios, Lodash, Preprocessors, npm, yarn, Figma, Git, Gitlab

The project team: 1 PO, 1 TL, 1 BA, 1 FE, 2 BE, 1 QA

Duration: 5 month

Project status: Sold & Closed

February 2023 – April 2024 | [Tagtile](#) |
junior frontend developer

“HealthUApp” Next.js web app

HealthUapp is a web platform designed to increase physical activity among office employees through short, workplace-adapted exercises. Using artificial intelligence and machine learning, the app analyzes the user's posture and the accuracy of exercise execution, providing personalized recommendations and reminders. The platform integrates with corporate wellness programs and helps prevent diseases caused by a sedentary lifestyle, improving overall productivity and well-being. All processes are gamified and compared in a user leaderboard.

- ❖ Website with posture exercises using machine learning. Focused on creating and validating forms develop new ui & ux animations;
- ❖ Integrated Google Firebase and company databases for data management;
- ❖ Set up SEO optimization in the application code.

Tech stack: React, Next.js 13, Sass, Material UI, TypeScript, Redux Toolkit, MediaPipe, i18next, Docker, Firebase, Axios, D3.js, Canvas, Jest, Gsap, Framer Motion

Project status: Sold & Closed

Duration: 5 month

“SpeechScribe audio” Next js chrome extension

This is a browser extension for automatic audio-to-text conversion. It allows users to quickly and accurately transcribe recordings of meetings, lectures, songs, and podcasts without the need for manual transcription. Thanks to the speech processing model and an easy-to-use interface via the Chrome extension, users can upload audio files and receive ready texts in just minutes. The app supports various audio formats and offers high accuracy.

- ❖ Developed a front-end browser extension with authorization and various subscriptions;
- ❖ IConnected the Transformer.js model to translate audio from various languages into text.

Tech stack: React, TailwindCSS, Material UI, TypeScript, MobX, i18next, Firebase, Axios, Transformers.js, Rollup

Duration: 2 month

“Irregular verbs” React Native app

A mobile app for mastering English irregular verbs through a variety of interactive features. The app provides daily training exercises, a smart vocabulary system, progress tracking, and an engaging game format to reinforce learning. Users can sort verbs alphabetically, by grammatical pattern, by difficulty level, or by learning progress. The application includes typing exercises to practice verb forms in context and supports translations into multiple languages.

- ❖ Redesigned the app's user interface for a better user experience. Completely dented navigation for better user experience;
- ❖ I worked on user subscription plans and integrated voiceover for all words and phrases from the backend.
- ❖ Worked on complex form handling for user data input. Fixed bugs and improved app stability.

Tech stack: React, React Native Expo, SCSS, TypeScript, React Native MMKV Storage, Reanimated, Formik + Yup, Axios, Firebase, Mixpanel, MobX

Duration: 4 month

“English cards” React Native app

A mobile application for learning and reinforcing English vocabulary through a daily word feed. The app shows a new word each day with definition, example usage, synonyms and pronunciation, and allows users to save favorite words and revisit them later. Users can set up daily reminders, track how many words they have learned, and explore additional words beyond the daily suggestion.

- ❖ Developed a reusable UI Kit and responsive design
- ❖ Engineered an interactive flashcard-based gamification feature
- ❖ Implemented a comprehensive in-app dictionary module with full-text search

- ❖ Integrated dictionary backend via RESTful API with Axios interceptors, JWT authentication, error handling, and real-time data synchronization.

Tech stack: React, React Native Expo, SCSS, TypeScript, React Native MMKV Storage, Reanimated, Formik + Yup, Axios, Firebase, Mixpanel, Redux

Duration: 2 month

“Posture” Ionic app

A mobile application for tracking and analyzing posture, both for individual users and the entire family. Using the device's camera and machine learning technologies, the app detects spinal coordinates and calculates deviations from standard posture norms. Users can view posture history over time, add family members, export data as documents, and receive personalized recommendations for posture improvement.

- ❖ Refactored an app from Ionic to React Native to improve performance;
- ❖ Developed new algorithms for spine curvature calculation;
- ❖ Implemented machine learning MediaPipe for posture recognition and spine curvature analysis.

Tech stack: React, Ionic + Capacitor, TailwindCSS, TypeScript, Redux Toolkit, MediaPipe, TensorFlow.js, Firebase, Mixpanel, D3.js

Project status: Unfinished

Duration: 2 month

Certificates

Website development with HTML, CSS & JS | IT Academy

[JavaScript and React course](#) | TeachMeSkills

[Angular the rolling scope school course](#) | RsSchool

Education

Bachelor of Economic Informatics | Belarusian State University - Minsk, Belarus | 2019-2023

Communication Skills

Russian – Native

English – Upper-Intermediate

Polish – Intermediate

Technical Skills

HTML/CSS, SCSS, SASS, Tailwind, JavaScript, Typescript, React, Redux toolkit, MobX, React-Admin, Next.js, Firebase and Supabase, Ant Design, Canvas, Framer Motion, Gsap, Axios, Jest, React Native expo & cli, Ionic, Angular, RxJs, NgRx, Node.js, AI development with Cursor, agile software development
